Notes: ①Test conditions: 100kHz/0.1V;

②Product of input voltage and excitation time;

③The temperature of the transformer(ambient plus temperature rise) should be within the operating temperature range;

④The storage temperature of the transformer only;

⑤We suggest that times of reflow soldering should not exceed twice, for actual application, please refer to IPC/JEDEC J-STD-020D.1.

Notes:

1. If it is required to further reduce input and output ripple, the capacitance of C1 and C2 can be increased properly if required, and should be connected close to the pin terminal of the module.
2. In order to ensure the converter can work reliably with high efficiency, the minimum load should not less than 1% rated load when it is used. If the needed power is indeed small, please parallel a resistor on the output side (The sum of the efficient power and resistor consumption power is not less than 1%).
