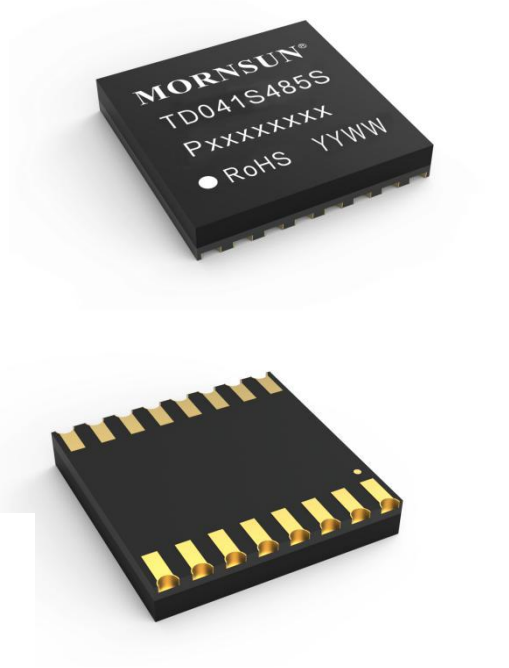
MORNSUN®

TD041S485S
DFN package isolated RS485 Transceiver

Features

- Ultra-small, ultra-thin, chip scale DFN package
- Compliant with TIA/EIA-485-A standard
- I/O power supply range supports 3.3V and 5V microprocessors
- High isolation to 3750Vrms
- Bus-Pin ESD protection up to 15kV(HBM)
- Baud rate up to 20Mbps
- ＞25kV/μs CMTI
- Low communication delay
- 1/8 unit load—up to 256 nodes on a bus
- Bus fail-safe
- Bus driver short circuit protection
- Industrial operating ambient temperature range: -40℃ to +105℃
- Meet AEC-Q100 Standards
- Meet EN62368 Standards
- Moisture Sensitivity Level (MSL) 3

Package



Applications

- Industrial Automation
- Building Automation
- Smart Electricity Meter
- Remote Signal Interaction, Transmission

Functional Description

TD041S485S is a half-duplex enhanced transceiver designed for RS−485 data bus networks.which is fully compliant with TIA/EIA-485-A standard and is suitable for data transmission of up to 20 Mbps. Their logic side supports 3.3V and 5V logic level conversion. Receivers have an exceptionally high input impedance.which places only 1/8 of the standard load on a shared bus and up to 256 transceivers .

TD041S485S reliability design of A, B pin is emphasized, including driver output over current protection and enhanced ESD design. The ESD protection level of A,B pin can be up to 15KV (Human Body Model).

Pin Descriptions

Pin Number	Pin Name	Pin Functions
1	VDD1	Power Supply(Logic side)
2	GND1	Ground(Logic side)
3	RXD	Receiver Output Data
4	$\overline{RE}$	Receiver Enable Input. When $\overline{RE}$ is low, if (A−B) ≥ −10 mV, then RxD = high. If (A−B) ≤ −200 mV, then RxD = low.
5	DE	Driver Enable Input. When DE is high, outputs are enabled. When DE is low, outputs are high impedance. Drive DE low and $\overline{RE}$ high to enter shutdown mode.
6	TXD	Driver Input
7	GND1	Ground(Logic side)
8	GND1	Ground(Logic side)
9	GND2	Ground (Bus Side)
10	GND2	Ground (Bus Side)
11	NC	No Connect
12	A	RS485 Bus A Line
13	B	RS485 Bus B Line
14	NC	No Connect
15	GND2	Ground (Bus Side)
16	VDD2	Power Supply (Bus Side)

Absolute Maximum Ratings

General test conditions: Free-air, normal operating temperature range (unless otherwise specified).

PARAMETERS	UNIT
V_{DD1}	−0.5 V to +7 V
V_{DD2}	−0.5 V to +6 V
Digital Input Voltage (DE, $\overline{RE}$, TXD)	-0.3V to +6V
Digital Output Voltage (RxD)	-0.3V to +6V
Driver Output / Receiver input Voltage	−8 V to +13 V
Operating Temperature Range	−40°C to +105°C
Storage Temperature Range	−50°C to +125°C
Reflow Soldering Temperature	Peak temp. ≤260℃, maximum duration ≤60s at 217℃. Please also refer to IPC/JEDEC J-STD-020D.3.

Important: Exposure to Absolute Maximum Rated conditions for an extended period may severely affect the device reliability, and stress levels exceeding the “Absolute Maximum Ratings” may result in permanent damage.

Recommended Operating Conditions

Recommended Operating Conditions		Min.	Typ.	Max.	Unit
V_{DD1}	Logic Power Supply	2.375	3.3	5.5	V
V_{DD2}	Bus Power Supply	4.5	5	5.5	
V_{IH}	High-level input voltage(TXD, DE, $\overline{RE}$)	2		V_{DD1}	
V_{IL}	Low-level input voltage(TXD, DE, $\overline{RE}$)	0		0.8	
V_{ID}	Differential input voltage	-7		+12	
R_L	Differential output load resistance	54	60		Ω
	Signaling rate			20	Mbps

Detailed Description

TD041S485S is an advanced RS-485 transceivers. They each contain one driver and one receiver. These devices feature a fail-safe circuitry that guarantees a high receiver output voltage when the receiver inputs are either open, shorted or when they are connected to a terminated transmission line with all drivers disabled. TD041S485S operates with a two power supply. Their logic side supports 3.3V and 5V logic level conversion. The whole machine can monitor the overall working state of the module and limit the output high current to prevent the bus from overload or short circuit causing unrecoverable damage to the transceiver.

Receiver input filter: TD041S485S receiver have an integrated input filter which enhances noise immunity of the high-speed differential signals. The receiver propagation delay increases due to this filtering.

Bus fail-safe: Ordinary RS485 bus receivers will be in an indeterminate state when -200mV< A - B <-10mV. This situation can occur whenever the data bus is not being actively driven. The advanced Fail-safe feature of the TD041S485S guarantees a high receiver output voltage if the receiver's differential inputs are either shorted, open circuit, or if they are connected to a termination resistor.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final interpretation

The TD041S485S receiver thresholds are very precise, and the offset between threshold voltage and ground has a margin of at least 10mV. This guarantees that the receiver output is a high voltage even the input differential is zero volts, thus maintaining compliance with the EIA/TIA-485 standard.

Load abilities on the bus (256 nodes) The standard receiver input impedance of RS-485 is 12kΩ (1 unit load). A standard RS485 driver can drive at least 32 unit loads. The TD041S485S transceiver is designed to 1/8th of the standard unit load and the input impedance is higher than 96kΩ, hence allowing up to 256 unit loads. The TD041S485S can work combined with other standard RS485 that use the smaller amount of unit loads.

Low power shutdown mode A low-power shutdown mode is triggered by simultaneously bringing high and DE low. During shutdown mode the device supply current is 6mA typical. DE and can be directly connected and controlled by the same I/O. The devices are guaranteed not to enter shutdown mode if is high and DE is low for less than 50ns. If this state is maintain for at least 600ns, the device will shutdown reliably.

Driver output protection The device prevents excessive output current caused by fault conditions or driver short circuit. A driver current limit on the output stage provides and ensures immediate protection against short circuits over the entire common mode voltage range.

Application circuit

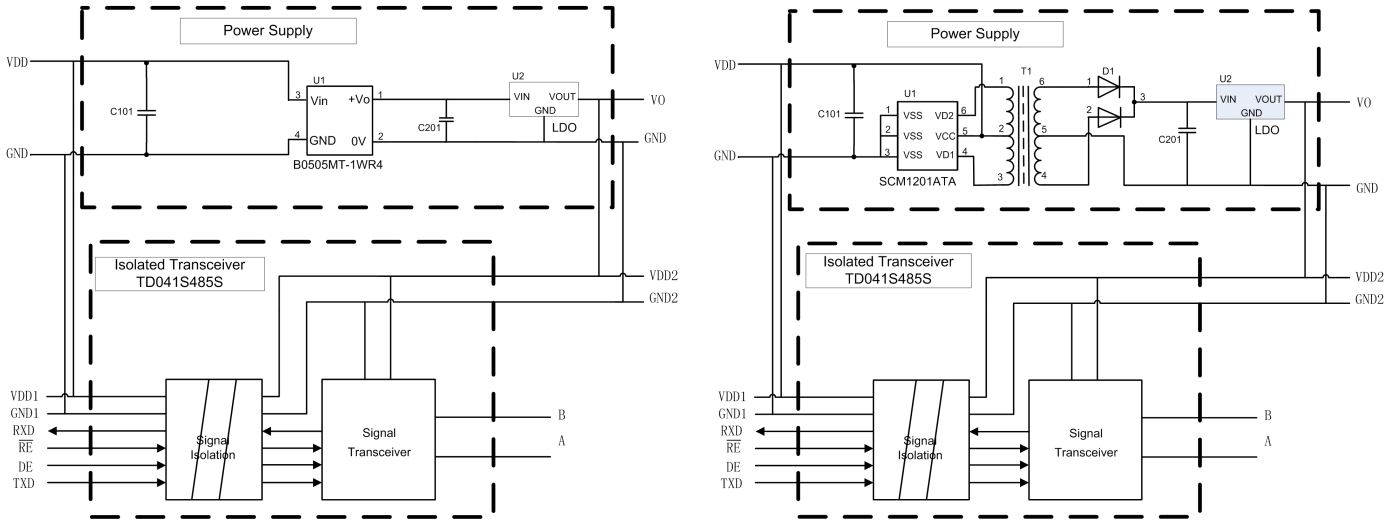

Figure 13. Receiver propagation delay test circuit and wave forms

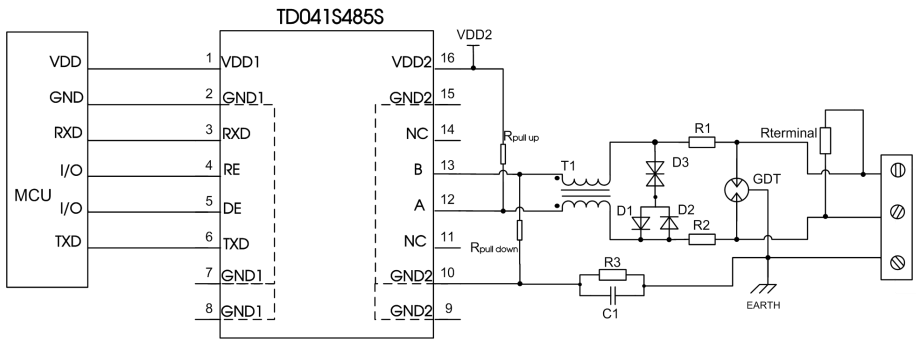

Figure14. Port protection circuit for harsh environments

Recommended components and values:

Component	Recommended part, value	Component	Recommended part, value
R3	1MΩ	R1, R2	2.7Ω/2W
C1	1nF, 2kV	D1, D2	1N4007
T1	ACM2520-301-2P	D3	SMBJ8.5CA
GDT	B3D090L	$R_{terminal}$	120Ω

As the modules internal A / B lines come with its own ESD protection, which generally satisfy most application environments without the need for additional ESD protection devices. For harsh and noisy application environments such as motors, high voltage/current switches, lightning and similar however, we recommended that the user protects the module’ s A / B lines with additional measures and external components such as TVS tube,

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final interpretation

common mode inductors, Gas discharge tube, shielded twisted pair of wires with the same single network Earth point. Figure 14 shows our recommended circuit diagram for such type of applications with components and values given in the table above. This recommendation is for reference only and may have to be adapted accordingly with appropriate component values in order to match the actual situation and application.

Note: ①Select the $R_{terminal}$ according to the actual application.

②When using the recommended port protection circuit, it is recommended that the communication rate be less than 10Mbps. If high-speed conditions are used, the port protection circuit will affect the bus output.

Using Suggests

① Hot-swap is not supported.

② If the external input of TXD is insufficient, the pull-up resistor should be added according to the situation.

③ Refer to *IPC 7093* for the welding process design of this product. For detailed operation guidance, please refer to *Hot Air Gun Welding Operation Instruction for DFN Package Product* or *Welding Operation Instruction for DFN Package Product*.
