# DC/DC Converter URF2424QB-150W(F/H)R3 (A5/A6)

## **MORNSUN®**

150W isolated DC-DC converter
Ultra-wide input and regulated single output

### **FEATURES**

- Ultra-wide 4:1 input voltage range
- High efficiency up to 89%
- I/O isolation test voltage: 2250VDC
- Operating ambient temperature range -40℃ to +85℃
- Input under-voltage protection, output over-voltage, over-current, short-circuit protection, over-temperature protection
- Five-sided metal shielded package
- Industry standard ¼-Brick package and pin-out

URF2424QB-150W(F/H)R3(A5/A6) of isolated 150W DC-DC product with ultra-wide 4:1 input voltage. It features efficiency up to 89%, 2250VDC input to output isolation, operating ambient temperature of -45°C to +85°C, input under-voltage, output over-voltage, over-current, short-circuit protection, over-temperature protection. The products meet CLASS A of CISPR32/EN55032 EMI standards by adding the recommended external components, and they are widely used in applications such as battery powered systems, industrial controls, electricity, instrumentation, railway, communication and intelligent robotic.

|                           | Input Voltag       | Input Voltage (VDC) |                  | Output              |                             | Capacitiv         |

### **Efficiency Curves**

### **Typical Performance Curves**

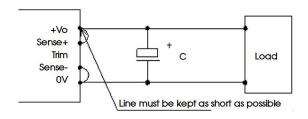

### Notes.

(1) Product application thermal design should be referred to the recommended PCB layout and recommended heat dissipation structure, please see DC-DC Converter Application Notes for specific operation.

### Remote Sense Application

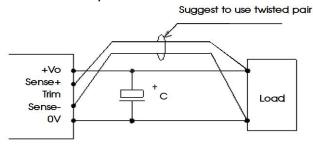

### 1. Remote Sense Connection if not used

### Notes:

- (1) If the sense function is not used for remote regulation the user must connect the +Sense to +Vo and -Sense to 0V at the DC-DC converter pins and will compensate for voltage drop across pins only.
- (2) The connections between Sense lines and their respective power lines must be kept as short as possible, otherwise they may be picking up noise, interference and/or causing unstable operation of the power module.

### 2. Remote Sense Connection used for Compensation

### Notes:

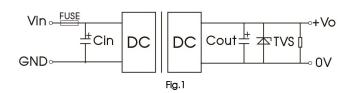

- (1) Using remote sense with long wires may cause unstable output, please contact technical support if long wires must be used.
- (2) PCB-tracks or cables/wires for Remote Sense must be kept as short as possible. Twisted pair or shielded wairs are suggested for remote compensation and must be kept as short as possible.
- (3) We recommend using adequate cross section for PCB-track layout and/or cables to connect the power supply module to the load in order to keep the voltage drop below 0.3V and to make sure the power supply's output voltage remains within the specified range.
- (4) Note that large wire impedance may cause oscillation of the output voltage and/or increased ripple. Consult technical support or factory for further advice of sense operation.

### Design Reference

### Typical application

- (1) We recommend using the recommended circuit shown in Fig.1 during product testing and application, otherwise please ensure that at least a 220µF electrolytic capacitors is connected at the input in order to ensure adequate voltage surge suppression and protection.

  (2) We recommend increasing the value of Cin and pay attention to the unstable input voltage if the product input side is paralleled with motor drive circuit and/or larger energy transient circuits, to ensure the stability of input terminal and avoid repeatedly start-up problems due to input voltage lower than under-voltage protection point.
- (3) We recommend increasing the output capacitance with limited to the capacitive load specification and/or increasing the voltage clamping circuit(such as TVS) if the output terminal is inductive device such as relay or a motor, to ensure adequate voltage surge suppression and protection.
- (4) Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values Cin and Cout and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

| Vout(VD | C) F   | Fuse           |  | Cout  | TVS     |
|---------|--------|----------------|--|-------|---------|
| 20      | 20A, s | 20A, slow blow |  | 100µF | SMDJ28A |

Note: ①Please pay attention to the ambient temperature of the product when using an external capacitor, increase the electrolytic capacitor values to at least 1.5 times the original parameter if the ambient temperature is low.

## **MORNSUN®**

### 2.EMC solution-recommended circuit

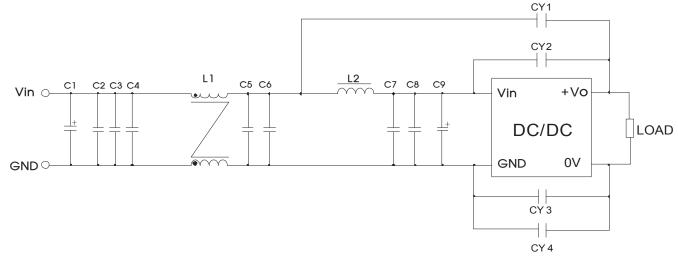

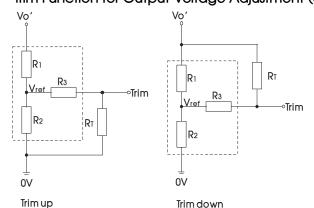

Fig. 2

| Components                 | Recommended Component value       |
|----------------------------|-----------------------------------|
| C1                         | 150µF/100V electrolytic capacitor |
| C9                         | 47µF/100V electrolytic capacitor  |
| C2, C3, C4, C5, C6, C7, C8 | 2.2µF/100V ceramic capacitor      |
| L1                         | 1.0mH/20A common mode inductance  |
| L2                         | 1.5µH/20A inductance              |
| CY1, CY2, CY3, CY4         | 1nFY1 safety capacitor            |

### 2. Trim Function for Output Voltage Adjustment (open if unused)

Calculation formula of Trim resistance:

up: 
$$R_{T} = \frac{\alpha R_2}{R_2 - \alpha} - R_3$$
  $\alpha = \frac{Vref}{Vo' - Vref} \cdot R_1$ 

down: 
$$R_T = \frac{\alpha R_1}{R_1 - \alpha} - R_3$$
  $\alpha = \frac{Vo' - Vref}{Vref} \cdot R_2$ 

Note:

Value for R1, R2, R3, and  $V_{\text{ref}}$  refer to the above table 1.

 $R_{\text{T}}$ : Resistance of Trim.

a: User-defined parameter, no actual meanings.

Vo': The trim up/down voltage.

TRIM resistor connection (dashed line shows internal resistor network)

| Vout(VDC) | <b>R1(K</b> Ω) | <b>R2(K</b> Ω) | <b>R3(K</b> Ω) | Vref(V) |
|-----------|----------------|----------------|----------------|---------|
| 24        | 24.872         | 2.87           | 15             | 2.5     |

e.g. Trim up 10%: 
$$a = \frac{2.5}{26.4 - 2.5} \times 24.872 = 2.6$$
 
$$R_T = \frac{2.6 \times 2.87}{2.87 - 2.6} - 15 = 12.637 \text{K}\Omega$$

Trim down 10%:

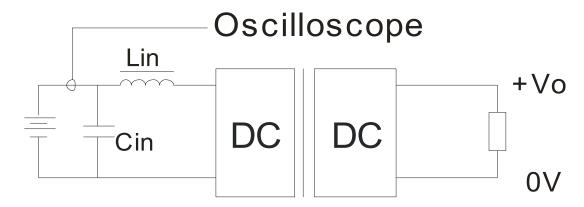

$$a = \frac{21.6 - 2.5}{2.5} \times 2.87 = 21.9268$$

$$\mathsf{R}_\mathsf{T} = \frac{21.9268 \times 24.872}{24.872 \cdot 21.9268} \cdot 15 = 170.17 \mathsf{K} \Omega$$

When using the Trim down function make sure that the RT resistor value is calculated correctly. If the Trim pin is shorted with +Vo, or its value is too low, then the output voltage Vo would be lower than 0.9Vo, which may cause the product to fail.

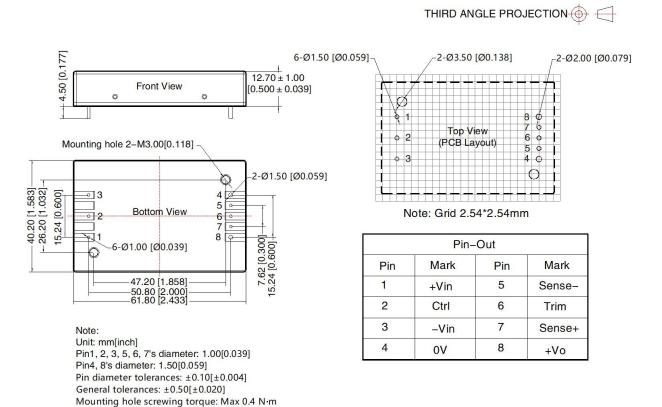

### 3. Reflected ripple current--test circuit

Note: Lin(4.7  $\mu$  H), Cin(220  $\mu$  F, ESR<1.0  $\Omega$  at 100 KHz)

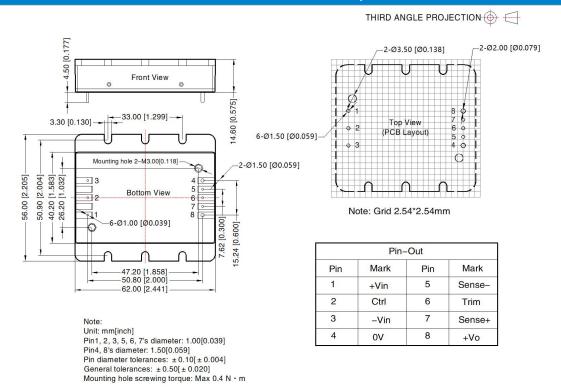

- 5. The products do not support parallel connection of their output.
- 6. The product test process shall ensure that the current of the input terminal meets the requirements of the starting current to ensure that the power supply of the product does not suffer from under-power.
- 7. For additional information please refer to DC-DC converter application notes on <a href="https://www.mornsun-power.com">www.mornsun-power.com</a>

### URF2424QB-150WHR3 Dimensions and Recommended Layout

Mounting hole screwing torque: Max 0.4 N · m

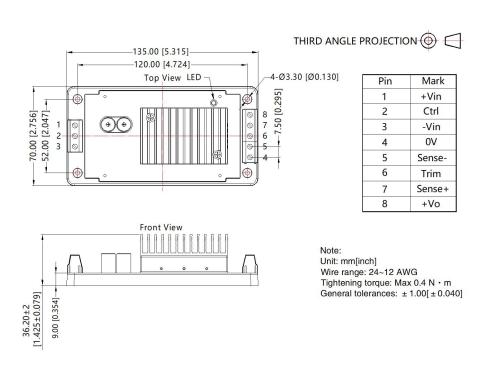

## Dimensions and Recommended Layout(URF2424QB-150WR3A5)

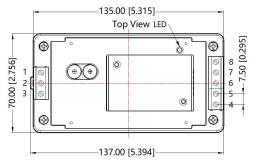

### Dimensions and Recommended Layout (URF2424QB-150WHR3A5)

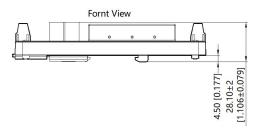

## Dimensions and Recommended Layout(URF2424QB-150WR3A6)

| Pin | Mark   |
|-----|--------|
| 1   | +Vin   |
| 2   | Ctrl   |
| 3   | -Vin   |
| 4   | 0V     |
| 5   | Sense- |
| 6   | Trim   |
| 7   | Sense+ |
| 8   | +Vo    |

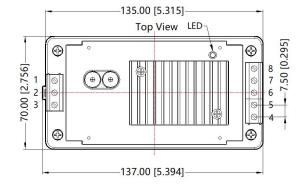

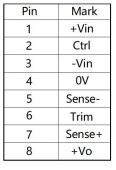

Unit: mm[inch] Wire range: 24~12 AWG Tightening torque: Max 0.4 N · m Installed on DIN RAIL TS35 General tolerances:  $\pm 1.00[\pm 0.040]$ 

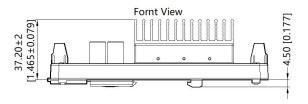

## Dimensions and Recommended Layout (URF2424QB-150WHR3A6

Note: Unit: mm[inch] Wire range: 24~12 AWG Tightening torque: Max 0.4 N · m Installed on DIN RAIL TS35 General tolerances:  $\pm 1.00[\pm 0.040]$ 

### Notes:

- For additional information on Product Packaging please refer to <a href="https://www.mornsun-power.com">www.mornsun-power.com</a>. Packing bag number: 58010113(URF2424QB-150WR3), 58200069(URF2424QB-150WFR3), 58220017(URF2424QB-150WHR3);
- 2. The maximum capacitive load offered were tested at input voltage range and full load;
- 3. Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25°C, humidity<75%RH with nominal input voltage and rated output load;
- 4. All index testing methods in this datasheet are based on company corporate standards;
- 5. We can provide product customization service, please contact our technicians directly for specific information;
- 6. Products are related to laws and regulations: see "Features" and "EMC";
- 7. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
