

DC/DC Converter

VRB24_HB-350WR3 Series

MORNSUN®

350W isolated DC-DC converter
Ultra-wide input and regulated single output

Patent Protection **RoHS**

FEATURES

- Wide input voltage range (2:1)
- High efficiency up to 89%
- I/O isolation test voltage: 1.5k VDC
- Output voltage adjustment Trim: 60%-110%Vo
- Output over-voltage, short-circuit, over-current protection, over-temperature protection
- Operating ambient temperature range: -40℃ to +100℃
- Industry standard 1/2 brick
- Meet EN62368 standards

VRB24_HB-350WR3 series of isolated 350W DC-DC products with a 2:1 input voltage range. They feature efficiencies of up to 89%, 1500VDC input to output isolation, operating ambient temperature range of -40℃ to +100℃. The products also provide output over-voltage, short-circuit protection. They meet CLASS A of CISPR32/EN55032 EMI standards. Additional functions include remote On/Off control, they are widely used in applications such as battery power supplies, industrial control, electric power, instrumentation and telecommunication fields.

Selection Guide

Certification	Part No.	Input Voltage (VDC)		Output		Full Load Efficiency ^② (%) Min./Typ.	Max. Capacitive Load(μF)
		Nominal	Max. ^①	Voltage (VDC)	Current (mA) Max./Min.		
--	VRB2412HB-350WR3	24 (20-36)	40	12	24000/0	83/86	6800
	VRB2424HB-350WR3			24	14500/0	85/87	4000
	VRB2428HB-350WR3			28	12500/0	87/89	3300
	VRB2432HB-350WR3			32	11000/0	87/89	2700

Note: ① Exceeding the maximum input voltage may cause permanent damage;
② Efficiency is measured in nominal input voltage and rated output load.

Typical Characteristic Curves

Note: Temperature derating curve is tested at nominal input voltage, operating condition is forced water convection, operating temperature is product surface temperature.

Remote Sense Application

1. Remote Sense Connection if not used

Notes:

- (1) If the sense function is not used for remote regulation the user must connect the +Sense to +Vo and -Sense to 0V at the DC-DC converter pins and will compensate for voltage drop across pins only.
- (2) The connections between Sense lines and their respective power lines must be kept as short as possible, otherwise they may be picking up noise, interference and/or causing unstable operation of the power module.

2. Remote Sense Connection used for Compensation

Notes:

- (1) Using remote sense with long wires may cause unstable output, please contact technical support if long wires must be used.
- (2) PCB-tracks or cables/wires for Remote Sense must be kept as short as possible. Twisted pair or shielded wires are suggested for remote compensation and must be kept as short as possible.
- (3) We recommend using adequate cross section for PCB-track layout and/or cables to connect the power supply module to the load in

order to keep the voltage drop below 0.3V and to make sure the power supply's output voltage remains within the specified range.
(4) Note that large wire impedance may cause oscillation of the output voltage and/or increased ripple. Consult technical support or factory for further advice of sense operation.

Design Reference

1. Typical application

All the DC-DC converters of this series are tested before delivery using the recommended circuit shown in Fig. 2.

Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values C_{in} and C_{out} and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

3. Trim Function for Output Voltage Adjustment (open if unused)

TRIM resistor connection (dashed line shows internal resistor network)

Trim resistor calculation:

$$\text{Up: } RT = \frac{(\Delta\% + 100)R_1R_4}{\Delta\%R_3} - \frac{100V_{ref}R_1R_4}{\Delta\%V_{out}R_3} - R_5$$

$$\text{Down: } RT = \frac{100V_{ref}R_1R_4}{\Delta\%V_{out}R_3} - R_5$$

Table 1

Vout(VDC)	R1(KΩ)	R3(KΩ)	R4(KΩ)	R5(KΩ)	Vref(V)
12	10.91	5	10	4.5	2.5
24	24.87	12	10	4.5	2.5
28	29.12	10	10	4.5	2.5
32	34.02	12	10	4.5	2.5

Note:

Value for R1, R3, R4, R5, Vref refer to the above table 1. RT: Resistance of Trim. Δ% is designed percentage of trim up or trim down. Example: Take the 12V model as an example, if it needs to be reduced by 10%, then Δ% is substituted into the value of 10,

$$RT = \left(\frac{100 \times 2.5 \times 10.91 \times 10}{10 \times 12 \times 5} - 4.5 \right) K\Omega$$

Note:

- For additional information on Product Packaging please refer to www.mornsun-power.com. The Packaging bag number of Horizontal packaging: 58200069;
- Recommend to use module with more than 5% load, if not, the ripple of the product may exceeds the specification, but does not affect the reliability of the product;
- The maximum capacitive load offered were tested at input voltage range and full load;
- Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25°C, humidity<75%RH with nominal input voltage and rated output load;
- All index testing methods in this datasheet are based on company corporate standards;
- We can provide customized and matched filter modules. For details, please contact our technical staff;
- Products are related to laws and regulations: see "Features" and "EMC";
- Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
